

Club Goals Committee

The membership voted on April 2, 1975, on the motion of George East, to set down on paper the long term goals of the Club, the time frame for them, and the methods of their attainment. President John Nicholson appointed a committee of three, George East, Michael Frascinella, and Richard Cutler, to prepare some ideas for presentation to the membership. After agreement and vote by the Club, the Committee will approach the Nature Center regarding any goals which relate to the Nature Center and our interrelationship with them.

The Committee solicits ideas from the membership and hopes that each individual will feel free to express what his views of our future path and goals might be. "Where shall we go and how shall we get there?" is the order of the Committee. Bring your ideas to the next meeting.

Goals Committee

South Shore Astronomical Society
