

So. Shore Astronomers to meet; show film on 'invisible universe'

NORWELL — The South Shore Astronomical Society will meet on Wednesday, June 1, at the South Shore Natural Science Center on Jacob's Lane in Norwell at 8 p.m. to see the film "The Invisible Universe" and to hear a talk on volcanoes on the Moon.

"The Invisible Universe" is a film produced by three radio astronomers of the National Radio Astronomy Observatory of Greenbank, West Virginia. The film explains how the "invisible universe" is being explored by radio telescopes.

After this short film, Michael Gurnis of Cohasset will speak on his original research, which supports the idea that there are volcanoes on the moon. Gurnis has been using space craft data to make his observations.

The South Shore Astronomical Society is an amateur group which was formed in 1958 and is for anybody interested in astronomy, from the beginner to the advanced

amateur.

Each month the Society prints a bulletin that contains a calendar of events of interest to astronomers, a description of what's been happening on the Sun, and other articles of interest to the astronomy-minded person.

To receive a newsletter, send a stamped envelope to South Shore Astronomical Society, 50 Reservoir Rd., Cohasset, MA 02025.

More information on the club can be had by calling Michael Gurnis at 383-1715 or Richard Cutler at 328-3917.
